

Course 2 — Chart Reading

Curriculum Document

Level: Beginner

Prerequisite: Trading 101

Goal: Teach students to confidently read and understand charts

Approach: Visual learning → observation → simple interpretation → guided practice

Course Overview

Module	Topic	What Students Learn
1	What is a Trading Chart?	The purpose of a trading chart, what information a chart provides, and why traders use charts
2	Understanding Price & Time	Identifying price and time on a chart and understanding the relationship between the two
3	Types of Charts	A basic introduction to line charts, bar charts, and candlestick charts
4	Understanding a Candlestick	Understanding Open, High, Low, and Close through simple visual examples
5	Bullish & Bearish Candles	Identifying candles that represent a price increase versus a price decrease
6	Candle Body & Wicks	The basic meaning of a candle's body and its wick/shadow
7	Reading Multiple Candles	Moving from a single candle to multiple candles to observe price behaviour
8	Understanding Timeframes	The basic concept of timeframes such as 1-minute, 5-minute, hourly, and daily
9	Zooming Into a Chart	Viewing the same price movement across different timeframes and understanding the difference
10	Price Going Up & Down	Visually identifying upward and downward movement on charts
11	Simple Market Movements	Basic observation that price does not move continuously — movement, pauses, and reversals
12	Reading a Chart Step-by-Step	A basic process for systematically reading any simple chart
13	Chart Reading Practice Lab	Making basic observations across multiple real/historical charts
14	Chart Reading Challenge	An interactive assessment where students answer simple questions by reading charts

What This Course Does Not Cover

This course does not introduce support/resistance, trendlines, indicators, chart patterns, market structure, advanced candlestick patterns, or trading strategies.

These belong in separate, dedicated courses.

Course Experience

In this course, visual interaction matters more than theory.

For example:

Show Chart → **Student Observes** → **Ask Question** → **Student Answers** → **AI Explains**

Example

“In this chart, which direction is the price mostly moving overall?”

Student chooses:

- ☐ Mostly Up
- ☐ Mostly Down
- ☐ Mostly Sideways

Chart Coach AI then explains whether the student's observation was correct.

Another Exercise

“Identify the opening price and closing price on this candle.”

Here, the student interacts directly on the chart, rather than simply solving an MCQ.

Core Outcome

By the end of the course, the student should be able to:

“I can read basic information from a chart — what the price is, what the time is, what a candle represents, which direction price is moving, and how different timeframes change the chart.”

Course Progression

This makes the curriculum's progression feel quite natural:

This sequencing works much better for beginners, since each course develops one specific skill instead of packing too many concepts into a single module.
