

Course 4 — The Language of Price

Curriculum Document

Level: Intermediate

Prerequisite: Trading 101 → Chart Reading 101 → Reading the Market

Goal: Teach students to deeply understand price behaviour, reactions, and patterns.

Positioning: From “I can analyse a chart” → “I can understand why price is behaving this way.”

Course Overview

Module	Topic	What Students Learn
1	Understanding Price Behaviour	Price does not move randomly; how buying and selling activity influences price
2	Impulse & Correction	Understanding strong price moves and the corrective movements between them
3	Reading Price Reactions	Observing how price reacts at important levels
4	Rejections	Identifying on a chart when price rejects a level
5	Breakouts & Failed Breakouts	Understanding the basic behaviour of genuine breakouts versus failed breakouts
6	Pullbacks	Interpreting price pulling back after a strong move
7	Momentum	Fast vs. slow price movement and a visual understanding of momentum
8	Candlestick Behaviour	Understanding the behaviour and context of candles rather than just individual candle patterns
9	Price & Volume Together	Observing price movement together with volume to gauge stronger/weaker movement
10	Market Context	Why the same price pattern can mean different things in different market conditions
11	Multiple Clues, One Story	Interpreting different price signals collectively rather than individually
12	Reading a Price Story	A structured, left-to-right interpretation of what price did and why it may have done it
13	Price Action Practice Lab	Identifying reactions, breakouts, pullbacks, and momentum on historical charts
14	Price Behaviour Challenge	Testing the student's observation and reasoning on unseen charts

The Main Shift in This Course

READING THE MARKET ASKED

“What is happening in the market?”

THE LANGUAGE OF PRICE ASKS

“What does price’s behaviour indicate?”

BEFORE, THE STUDENT WOULD JUST SAY

“Price came near resistance.”

NOW, THE STUDENT GRADUALLY UNDERSTANDS

“Price came near resistance, a breakout attempt happened, a rejection showed up, and then buyer strength weakened.”

This is the foundation of price action thinking.

Chart Coach’s Interactive Elements

Replay Mode

Reveal a historical chart candle-by-candle and collect the student's observation at every stage.

What Happens Next?

Freeze the chart → the student gives a prediction/interpretation → the next candles are revealed → the AI analyses the reasoning.

Mark the Reaction

The student highlights a rejection, breakout, or pullback area on the chart.

Explain Your Thinking

Not just an answer — the student explains their reasoning in text, voice, or video, and the AI gives feedback.

What This Course Does Not Cover Yet

This course does not go into complete trading setups, advanced strategies, options strategies, complex indicators, order-flow analysis, or automated trading.

This course's focus stays only on:

Price → Behaviour → Context → Interpretation

Core Outcome

By the end of the course, the student:

By the end of the course, the student will be able to read price movement as a continuous story rather than isolated candles — interpreting reactions, momentum, breakouts, pullbacks, and failed moves with context.
